

NEW Mini Valve

MSRP
\$51.00

Introducing the **NEW** #36 Mini Valve from Heinrich Company. The valve saves space on the machine table because it is attached directly to the vise. It is one less item to worry about during set-up or tear-down.

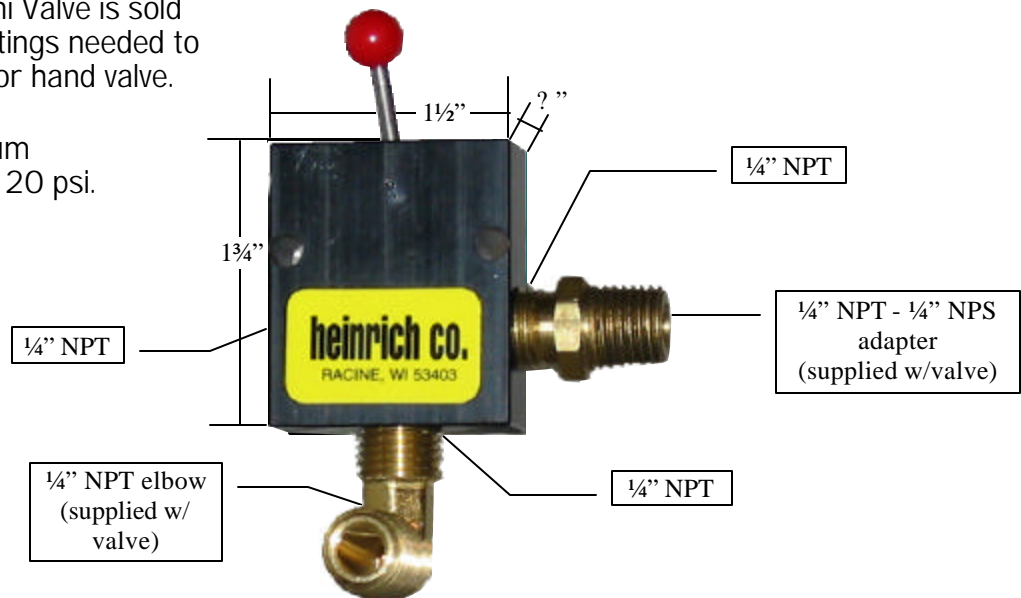

The inlet and exhaust ports are interchangeable so the air hose can be connected to either side of the valve.

The valve has a unique, over-center snap-action, giving a quick, sure response. The lever is detented in both positions. The operator does not need to hold the lever in either direction.

The #36 Mini Valve may be used as an alternative to the Heinrich 3-way foot treadle valve (#34-12CI) or 3-way hand valve (#34-18). The Mini Valve is sold complete with all the fittings needed to replace either the foot or hand valve.

Recommended maximum operating pressure is 120 psi.

The #36 Mini Valve works with all Heinrich single-acting vises, including the #33 and the #44, in addition to all three sizes of air operated cross-hole drill jigs (#AR-305, #AR-605, #AR-905).

The valve will work with ANY single acting air mechanism. The complete kit for Heinrich Company's single-acting air operated units comes standard with a foot treadle air valve (#34-12CI). If you want a unit with the new #36 Mini Valve, the vise-only option must be bought along with two hoses (#34-14) and the valve. Your purchase will be complete—no other fittings or accessories will be needed.

Order from your Heinrich distributor, including MSC Industrial, J&L Industrial, Production Tool Supply, and Rutland Tool.
